SELECTAGEN

SELECTAGEN

is Select Sires Canada's program to prevent inbreeding problems in grade herds and herds with little to no pedigree data. Select Sires Canada is committed to helping commercial producers with this long term program. Breeders will benefit from the unique combination of superior genetics, genomic science & management simplicity. All sires used in the SelectAGEN program will be proven through Select Sires' progeny test program. Emphasis is placed on production, moderate size, ability to maintain body condition score & fertility. All our Select Mating Service Evaluators are trained to provide this service. Ask your Select Sires Canada sales representative for more information.

Why use Uddergold as your barrier product?

"When the toughest environmental conditions exist, UDDERgold is the best barrier product available in Canada. It is not only a tremendous germicide that gives 4-5 hours of Germicidal kill after each application, but Uddergold is also the Cadillac barrier product. UDDERgold has a beathable barrier to allow the skin to stay healthy underneath, while keeping the bacteria from touching the teat and causing new infections. Use Uddergold in hot, humid and wet conditions when a barrier is needed, and the environment is challenged. It will do the job, like nothing else. Please remember that what makes Uddergold so effective is that the barrier is actually on the teat for 12 hours, thus the great protection. With that said, the barrier has to be removed properly to avoid build up. The barrier is water soluble, so it needs a good pre-dip like 4XLA, to start to break down the barrier, then during the prep procedure, you need to make sure there is good action on the bottom of the teat to remove the barrier."

Greg Stumpf - Vice President Corporate Accounts North America, Ecolab Inc.

Our Sales Representative Talks About: UDDERgold

"I recommend 4XLA as a pre-dip and UdderGold as a post-dip, during the months of hot, humid weather as the best protection there is on the market to help prevent environmental mastitis. This is also a great solution for cows leaking milk before milking time. I have had great support from local Vets for Uddergold as the best barrier on the market. Most of my customers go back to 4XLA pre & post after the weather changes in the fall." Marcel Leu - Select Sires Canada

Our Customers Talk About: UDDERgold

Ferme Fleur de Lys, St-Camille, Quebec:

"We have been using Uddergold as a teat dip since 2005 and we were satisfied. In 2007, with our new tie-stall facility we were advised to use 4XLA as a pre-dip.

Right away we appreciated the ease of using it. The fact of mixing the product for each milking assures us of the integrity of the product. The improvement in our SCS from year to year convinced us to continue and this year our SCS at the Quebec Milk Federation has been running below 150,000. We were very happy to receive a certificate for this and are encouraged to continue using 4XLA and Uddergold."

Nicole Turcotte, Denis &
Geneviève Rodrigue,
Ferme Fleur de Lys, St-Camille, Que.

Geneviève applying Uddergold as post-dip.
